

# Video Integration

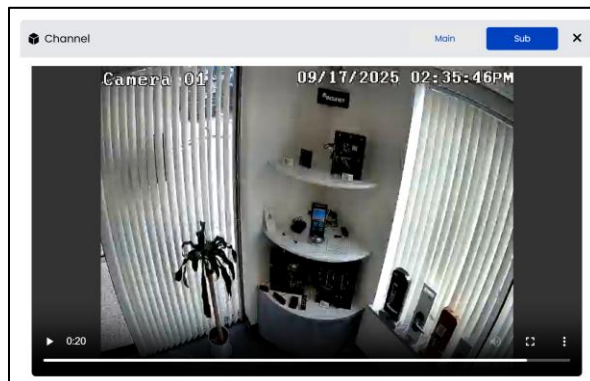

View **Live** video, create **event tags for viewing video tied to the event**. Our event log displays an icon with the event, one click retrieval of video for that event is displayed. Sort events by events, time and date. Push notifications can be produced notifying a recipient of the event and verified with video tagged. Sicunet offers integration with multiple video storage products or the option to attach USB storage or external drive memory record video directly through our platform.

Utilizing Chromium, our system provides video viewing of live or stored video. Chromium video player works with most smart devices browsers.

When viewed via the cloud, our system creates an SSL / AES 256 encrypted connection from the system to the user interface.

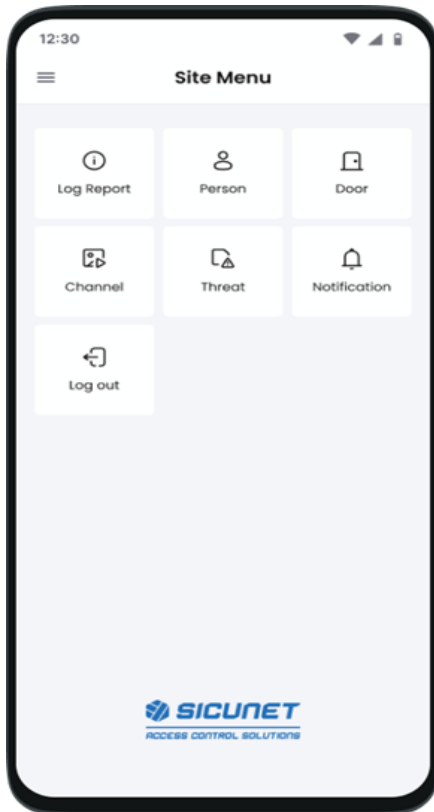

**Video Site Map Action and Status Icons**  
Click on and see status and right click to stream live video
